

Oilfield Service Suite - FieldTicket

A more productive and profitable way of working for oilfield services companies.

Taking paper-based field tickets from creation through to approval and invoicing can be an inexact business for oilfield services companies today, especially when such tickets are submitted manually by personnel in the field. Crucial line items, such as hourly rates and job numbers, can be logged inaccurately; tickets can take days to be submitted or get lost; and quite literally thousands of dollars of oilfield services can be left unattended in a truck's glove box.

Drillinginfo's FieldTicket platform enables you to gain control of your operations and transforms the way you do business, ensuring a seamless workflow from field ticket creation through to invoicing and increasing productivity, profits and accuracy in your day-to-day operations.

Increase Productivity and Save Time

Enjoy a productive workforce with the easy creation and submission of field tickets via a laptop or phone, leaving your team to focus on what they do best - generating revenues and creating value for customers. Through a transparent workflow, FieldTicket ensures no more paper-based bottlenecks or time wasted re-creating tickets. With up to 50% of all original field tickets having errors, the cost savings and increased productivity can be huge. Users can also access other modules alongside FieldTicket, such as Equipment Tracking and Maintenance Schedules, to ensure their teams are even more productive.

Secure Cash Flow and Boost Profits

FieldTicket enables you to get paid as quickly as possible with no more late, lost or inaccurate tickets and the data entered just once. With an average oilfield services company generating up to 80 tickets a week with a value of say \$4,000 per ticket, there's a lot of money left unbilled if field tickets are not turned into invoices quickly. Working alongside Drillinginfo's Open Invoice module, FieldTicket will ensure that accurate and approved invoices get out the door as soon as the work is completed, generating cash flow and boosting profits.

Enjoy Complete Accuracy and Healthier Customer Relationships

With a simple customized dropdown menu, FieldTicket leads to 100% accuracy in your field tickets and invoices with correct job coding, hourly rates, dates and times, and a transparent workflow highlighting projects and tickets that are completed, reviewed, disputed or approved. FieldTicket cleans up validation errors and does the maths for you, ensuring accurate quotes, field tickets and invoices and healthier and stronger customer relationships.

FieldTicket Features and Benefits

Features	Benefits
Easy to Access	A web-based, software as a service (SaaS) offering. Receive a link, user id and password, and you are good to go.
Comprehensive Format	Includes up to 16 customizable fields... job codes, regions, customers, dates & times, hourly rates, billable line item fields, sales tax and much more, as well as section for qualitative comments.
